Infobase

Streaming Video Platform

LDAP Integration Settings

The following information is needed to set up LDAP User Authentication for your Infobase Streaming Video Account. We require access to external LDAP server/firewall, and a few other pieces of vital information about your configuration before we can get started.

Account Information

Institution Name: Date of Request:

District or Consortium Parent Account:

Base Connection (cn)

This is the external LDAP server address we will use to send requests to. This will need to be a public domain or IP accessible to our platform. *Example: (cn=LDAP://192.168.0.17/dc=Dev,dc=local")*

Server IP:

LDAPS (SSL):   Port:

Service Username / Password

This is an account on your LDAP server that has proper permissions to make requests. *Example: ldapQueryUser="testadmin" / ldapQueryPass="hghjghjh"*

Username: Password:

User Groups & Roles

Please provide a basic mapping of groups on your LDAP server to the corresponding roles in our Streaming Video Platform (if applicable) and at least one test account for each.

Student: Teacher:

Administrator: Other:

Test Accounts:

Infobase Trusted IPs

Here is list of the Infobase Server IPs that need to be added as a trusted source on your firewall.

198.46.119.2	52.7.163.252	50.16.61.130
18.235.80.154	35.170.198.121	3.224.46.106

Additional Information

Please provide any additional requirements or parameters in regards to your LDAP configuration.

If you have any questions or comments, please contact our LDAP Support Staff at video.support@infobaselearning.com.
